Full Stack Assignment – 35

Assignment ID: FSD-35

Title: Internal Evaluation Management System

Duration: 3 Hours

1 Objective

Design and develop an **Internal Evaluation Management System** that allows evaluators to assess submissions and administrators to manage evaluation records.
The system must enforce score finality and ensure **data persistence using a database**.

2 User Roles

EVALUATOR

- Register and log in to the system
- Evaluate assigned submissions
- Submit evaluation scores and remarks

ADMIN

- Register and log in to the system
- View all evaluations
- Manage evaluation assignments

3 Functional Requirements

Authentication & Authorization

- Implement user registration and login
- Use **JWT-based authentication**
- Protect all backend APIs using JWT
- Enforce **role-based access control** on APIs and frontend views

Evaluation Management

- EVALUATOR can submit scores and comments
- Evaluation data must be stored in the database
- ADMIN can view all evaluation records
- Evaluation details must be retrieved dynamically

4 Business Rule (Critical)

⚠️ **Evaluation scores must not be modified after submission.**

Once an evaluation is submitted, it must be treated as final.

5 Technical Constraints (Mandatory)

- All evaluation and scoring data **must persist in a database**
- Hardcoded or in-memory storage is **not allowed**
- Backend APIs must reflect actual database state
- JWT authentication and role validation are mandatory
- Use environment variables for sensitive configuration

6 Frontend Requirements

- Login and registration pages
- Role-based dashboards for EVALUATOR and ADMIN
- Evaluation submission view for EVALUATOR
- Evaluation listing and overview view for ADMIN

UI design is not evaluated; state immutability and correctness matter.

7 Submission Requirements

- GitHub repository (frontend and backend)
- Live frontend deployment link
- Live backend deployment link
- README.md must include:
  - Project overview
  - Tech stack
  - User roles and permissions
  - API endpoints
  - Database schema
  - Live deployment links

8 Evaluation Note

Evaluation focuses on **finality enforcement, role control, and end-to-end execution**.
